

STUDY PLAN

Dear Selection Committee members, I am putting forward my study plan letter to give a general idea and concern about getting the scholarship. I was delighted when I saw this scholarship opportunity, and with this letter, I would like to express my gratitude to you and Chinese Government Scholarship team. I am ABDULBASET AL-ROMAIMAH, a master's student at Guangxi Medical University now and expected to graduate in June 2021. I published one paper in the SCI journal in October 2020. Besides, I have submitted the second one, and it is under review now. Moreover, I am doing my experiment now and writing the third article, and I will publish it as soon as possible. I am planning to apply for a Ph.D. in pharmaceutical science.

To be a full professor is a long way that needs many years and much effort. That is precisely the long-term goal that I plan to achieve. This was my dream when I was in high school. I was born in Taiz city, Yemen. I studied my primary, secondary and high school there. During high school, my dream was to be a professor in Pharmaceutical science. So I started studying hard from that time, and I got an excellent grade in the high school exam. After that, I moved to Sana'a city (the capital city of my country), and I passed the university entrance exam to study pharmacy at Sana'a university (the best university in my country). During my undergraduate study, I was one of the best five students in pharmacy college, and I got a very good grade with an honor degree. Later, I got a job as a teacher assistant in the pharmacology department at Taiz University.

Three years later, I got an excellent chance to come to China to study a Master's degree at Guangxi Medical University. I have learned the Chinese language in the first year, and I passed the HSK5 test. Then, I studied many courses related to my

major, and I have passed all courses. I have been doing my research experiment, almost finished. Now I can do many research techniques, for example; Extraction, separation, and analysis of active components of herbal medicine, chromatography, Spectroscopy, animal experiments, western blot, PCR, ELISA, H/E staining, and Immunohistochemistry. Furthermore, I have the ability to write scientific articles. I have published an SCI paper in October 2020, one paper I have submitted, and it is under review, and the third paper I am writing these days. I am applying for a Ph.D. in pharmaceutical science. I promise that I will be one of the best students, and I have enough ability to be like that.

I feel that my English is good enough to study Ph.D. in pharmaceutical major because I studied my undergraduate in the English program. Besides, I have passed the TOEFL English test. On the other hand, my Chinese also is good enough to study Ph.D. in pharmaceutical science because I have studied Master in Chinese program. Moreover, I have passed the Chinese HSK5 test.

Why do I choose to study in China?

Reading the books, watching the news, analyzing and observing the people, and impressing how the Chinese people proved themselves to be dedicated to their work and real efforts set china as a successful example for other third developing countries. The fast-growing economy, technological development, and the high ranking education institutes of China make good aspiration for the outstanding students for better carrier perspectives. Furthermore, various Chinese cultures are so interesting, I have learned about some of these cultures during my master studies, and I plan to study more about these cultures. So I believe that China is a perfect place for pursuing my postgraduate study. Living in China is more

convenient now, and most of the people are friendly and helpful. All these reasons make China an ideal place to pursue my postgraduate study.

At the beginning of 2020 and revealing of COVID-19, I stayed in China. I have seen how China is great. I have seen how China controlled on the pandemic very quickly and how the people followed the rules. Till now, as I think China is one of the safest countries in the World.

This scholarship opportunity I perceive as an extraordinary opportunity to interact with students and scholars from diverse professional and cultural backgrounds coming from all the World. This type of networking is very important for integration of different ideas and perspectives pertaining to diverse global issues.

Why do I choose Tianjin University?

University of **Tianjin** is one of the top universities in China, and the department of..... is one of high rank. I found the impression profile of many professors with remarkable research projects specially research work of Prof.; it so really admirable for me, and I think his supervision will improve my research abilities.

Why do I choose to study pharmaceutical science?

I think no one will mind if I said that pharmacy is one of the most important sciences in the World. It is enough to see how many complicated diseases still cannot be treated till now, for example, diabetics, cancers, Aids, and covid-19, the pandemic that terrifies all people in the World and killed millions of them. So I believe in the way that I am going on. Another reason that makes me choose this major is that there is a shortage of professors and experts in this major. So I am sure about that after I finish my Ph.D. study, I will go back home, and I will

transfer the Chinese experience in my major to my country, and I will try my best to improve pharmaceutical science.

Personality:

I am a socially active person with friendly nature. I am an ambitious, energetic, and hardworking student who can do something to benefit country that I have been working in. I am very motivated to start this program. I like to meet people from different countries with different cultures, and I can easily make friends. I like to respect the rules, either law of the country which I am in or the university which I am studying in.

At last, I want to thank you again for giving like this chance, and I would highly appreciate being one of the selected applicants.
